

# Three ways Shadow® and Tanaris® help get your OSR off to the best start...

**BASF**  
We create chemistry

## 1 They help you establish a good, even crop before winter

To establish a good, even crop, our advice is to:

REMOVE WEEDS EARLY

## 2 They provide long-lasting and reliable control of key weeds

RELIABLE IN DRY CONDITIONS DUE TO MULTIPLE POINTS OF UPTAKE BY THE WEED

RESIDUAL ACTIVITY ON A WIDE SPECTRUM OF WEEDS, INCLUDING:

AVOID HAVING TO RELY ON LATE AUTUMN SPRAYS...

FEWER SPRAY DAYS

CONTACT HERBICIDES CAN BE AFFECTED BY LEAF WETNESS

SMALL WEEDS CAN BE COVERED BY THE CROP

## 3 They play a key role in sustainable black-grass management

OSR OFFERS A GOOD OPPORTUNITY TO CONTROL BLACK-GRASS AND USE DIFFERENT MODES OF ACTION COMPARED TO CEREALS

LOW RESISTANCE RISK HERBICIDES AND PROVIDE A KEY START TO THE BLACK-GRASS PROGRAMME

REMOVE SOME OF THE BLACK-GRASS POPULATION

FOR BEST CONTROL, USE A 3 PRONGED ATTACK – A PROGRAMME OF AN EARLY RESIDUAL, LIKE SHADOW® OR TANARIS®, FOLLOWED BY CLETHODIM, THEN PROPYZAMIDE
